8 Leading Energy Drink Brands Share of Advertising Expenditures 2018 – 2023----- 21

9 Energy Drink Share of Advertising Expenditures by Media 2018 – 2023----- 22

Despite the arguable requirement of energy drinks to contain enough sugar for the energy function, market realities have dictated the development of low-calorie energy drinks.

- With many people taking in too much sugar already and given the fact that some people crave caffeine without necessarily choking down teaspoons of sugar, low-calorie energy drinks such as Red Bull Sugarfree, Monster Energy Lo-Carb and Rockstar Sugar Free, among others, meet a need state.
- These top energy drink companies have also increased the number of diet energy drinks on offer in recent years. Notable products in this regard include Red Bull Total Zero, Monster Ultra and Rockstar Pure Zero. Monster Ultra has added several variants and collectively is Monster Beverage's number two seller behind the original Monster.
- In general, diet drinks tend to appeal more to females — and undoubtedly diet energy drinks have brought women into the franchise — but males are more likely to switch to diet versions of their favorite drinks as they get older, particularly if the marketing is perceived as “cool” enough — the main examples in the CSD realm being Diet Mtn Dew and Coca-Cola Zero Sugar. PepsiCo has used a hybrid sweetener approach with success for its “energizing” CSD line, Mountain Dew Kickstart, without calling that much attention to the fact that it is mid-calorie.
- What's more, one of the hotter energy drink brands to emerge was Bang, which is zero calorie. Consumers probably didn't realize it's zero calories or didn't care, as their focus was on the ingredients that confer energy and other performance-related bona fides. (For some on the keto or paleo diets, zero calorie is a plus.) While Bang hit a terrible patch, other zero-calorie brands such as Celsius and C4 have performed strongly. And even Bang has started to grow again.
- Low-calorie energy drinks have risen from 17.3% of energy drink volume in 2006 to 49.7% in 2023. In the U.S., low-calorie energy drinks had only come into existence in January 2003 with the launch of Red Bull Sugarfree.
- The general trend of low-calorie energy drinks outperforming their higher-calorie counterparts should continue to 2028. Diet energy drinks should increase their share of volume from 49.7% in 2023 to 52.7% in 2028. Their share of wholesale dollars is expected to grow from 41.9% to 43.8% in the identical five-year period.
